

### *Dispersing Humic Acid Granules*

***Blendable, Spreadable, Dispersible***

Humic DG combines pure dry humate with “Dispersing Granule Technology,” creating a spherical granule containing thousands of tiny humic acid sub-particles that “disperse” in minutes with water. These tiny sub-particles can self-incorporate into most soils with rainfall or irrigation.

Humic DG’s uniform spherical granules are easy to handle and spread evenly. They are ultra dry and ideal for blending with all types of fertilizers!

#### ***Benefits:***

- **BLENDABLE:** Ultra-dry granules are engineered to be compatible with all fertilizers, including urea
- **SPREADABLE:** Uniform, spherical granules allow for ease of handling and even application
- **DISPERSIBLE:** Utilizes “Dispersing Granule Technology” to facilitate granule breakdown and incorporation
- Low moisture content
- Hard granule that is resistant to breakage during handling
- Cleaner and easier to handle

#### ***Available Packaging:***

Product is available in:  
40 lb. Paper Kraft Bagging (50/pallet)  
1-Ton Mini Tote Bags

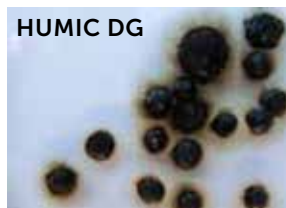

Please contact your Mesa Verde Humates<sup>®</sup> Sales Representative for additional product information.

HUMIC DG

Competitor’s dry humic product is dusty, non-uniform, and contains up to 20% moisture.
